Relocation Feasibility

RadioTrade is an independent two-way radio distributor accredited by Motorola as a Distribution Partner. Following a successful period of growth, the company decided to relocate their Eastleigh office and warehouse facility to Basingstoke and were recommended to us for the complete office refurbishment project for the new property.

Office Refurbishment

As well as the office re-fit, with new walls, carpeting and decoration, we also provided a specialist server room and dedicated lab rooms, complete with extractor systems to facilitate cleanroom environments.

The meeting room was fitted with state-of-the-art A/V presentation equipment, as well as computer cabling from the server room to all workspaces.

The office area was finished off with a newly fitted kitchen and staff area.

Warehouse Facility

To accommodate products and parts that are distributed on a daily basis, we also supplied and installed warehouse racking to the specification of the client.

This was designed to maximise the available area and the existing warehousing equipment in operation.

The complete project took around four weeks to complete.
